EDUCATION

University of Central Florida | GPA 4.0

Major: Computer Science B.S.

Orlando, FL

08/2024 – Present

EXPERIENCE

Software Engineering Intern

Vesta Teleradiology

Lake Mary, FL

02/2026 – Present

- Executed a zero-data-loss migration of over 50,000 legacy records into a relational **Supabase** database by architecting 10+ automated **Python** scripts with strict upsert logic and transactional data integrity checks.
- Orchestrated automated CI/CD pipelines via **GitHub Actions**, enforcing strict linting and mandatory peer-reviewed Pull Requests before fast-forwarding deployments to **GCP Cloud Run**.
- Streamlined business operations by integrating **n8n** webhook workflows to trigger automated credentialing status emails and real-time system alerts.
- Directed agile sprint cycles as acting Team Lead, delegating development tickets via **GitHub Projects** and presenting weekly technical progress reports to executive leadership.

Food and Beverage Attendant

Hilton Food and Beverage

Sanford, FL

06/2024 – Present

- Maintained high-efficiency customer service in a fast-paced environment, collaborating with cross-functional teams to manage inventory and resolve guest issues in real-time.

PROJECTS

Vesta Credentialing Application | *Next.js, tRPC, Drizzle ORM, Supabase, TypeScript*

02/2026 – Present

- Architected and deployed an enterprise-grade credentialing management system using **Next.js** and **tRPC**, replacing 30+ legacy Google Sheets with a centralized, **type-safe** web application.
- Engineered a dynamic **Role-Based Access Control (RBAC)** system backed by **Supabase**, securing protected healthcare data across 10+ custom views and restricting access strictly to verified corporate domains.
- Developed a complex **state-machine workflow engine** utilizing **Drizzle ORM** to track provider privileges and state licenses, featuring strict progression blockers and comprehensive **audit logging** for all user actions.

Demonlist Ultimate | github.com/alucienkozy/demonlist

12/2025 – 02/2026

- Achieved a scalable, decoupled architecture by deploying a full-stack application using **Next.js**, **FastAPI**, and **PostgreSQL** on **AWS**.
- Ensured consistent production environments and reduced deployment conflicts by containerizing backend services with **Docker** and hosting them on an **EC2** instance.
- Enabled scalable management of user-generated content by integrating **AWS S3** to securely store and serve profile avatars and video proof submissions.
- Enhanced user engagement on the global leaderboard by deploying the frontend interface via **AWS Amplify** and integrating a **Gemini**-powered AI chatbot to answer natural language queries.

Guess the OST | github.com/alucienkozy/guess-the-ost

06/2026 – Present

- Developing a real-time multiplayer music guessing game using **React** and **Node.js**, leveraging **Socket.io** for low-latency, bidirectional client-server communication.
- Managing complex synchronized game states across active lobbies, including live chat functionality, concurrent audio playback events, and custom UI animations using **Motion**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C

Frameworks & Libraries: Next.js, React, Node.js, tRPC, Drizzle ORM, FastAPI, Motion

Databases & Architecture: Supabase, PostgreSQL, REST APIs, Webhooks, Socket.io

Cloud, DevOps & Tools: GCP, AWS (EC2, S3, RDS), Docker, GitHub Actions, Git, n8n
