EDUCATION

University of Central Florida | GPA 4.0

Bachelor of Science in Computer Science

Orlando, FL

08/2024 – Present

EXPERIENCE

Software Developer

Vesta Teleradiology

Lake Mary, FL

02/2026 – Present

- Migrated more than 50,000 legacy records into a relational **Supabase** database with zero data loss by developing 10+ automated **Python** scripts with strict upsert logic and transactional integrity checks.
- Built **GitHub Actions** CI/CD pipelines that enforced linting and required peer-reviewed pull requests before deploying to **GCP Cloud Run**.
- Automated credentialing status emails and real-time system alerts by integrating **n8n** webhook workflows into business operations.
- Led agile sprint execution by delegating development tickets through **GitHub Projects** and presenting weekly technical progress to executive leadership.

Food and Beverage Attendant

Hilton Food and Beverage

Sanford, FL

06/2024 – 08/2026

- Delivered efficient customer service in a fast-paced environment while coordinating inventory and resolving guest issues across teams in real time.

PROJECTS

Vesta Credentialing Application | *Next.js, tRPC, Drizzle ORM, Supabase, TypeScript*

02/2026 – Present

- Architected and deployed an enterprise-grade credentialing management system using **Next.js** and **tRPC**, replacing 30+ legacy Google Sheets with a centralized, type-safe web application.
- Engineered a dynamic **Role-Based Access Control (RBAC)** system backed by **Supabase**, securing protected healthcare data across 10+ custom views and restricting access to verified corporate domains.
- Developed a complex **state-machine workflow engine** using **Drizzle ORM** to track provider privileges and state licenses, with strict progression blockers and comprehensive **audit logging**.

Demonlist Ultimate | github.com/alucienkozy/demonlist

12/2025 – 02/2026

- Built and deployed a decoupled full-stack application using **Next.js**, **FastAPI**, and **PostgreSQL** on **AWS**.
- Reduced deployment conflicts by containerizing backend services with **Docker** and hosting them on an **EC2** instance.
- Used **AWS S3** to securely store and serve user-generated profile avatars and video proof submissions.
- Enhanced user engagement on the global leaderboard by deploying the frontend through **AWS Amplify** and integrating a **Gemini**-powered AI chatbot for natural-language queries.

FE Arena | github.com/alucienkozy/fe-arena

04/2026 – Present

- Built an original study platform for UCF Computer Science Foundation Exam topics with solo practice, private two-seat rooms, public matchmaking, and five-round server-authoritative matches.
- Engineered real-time multiplayer state management using **React**, **TypeScript**, **Node.js**, and **Socket.IO**, including disconnect recovery, rematches, chat, synchronized timers, and server-side grading.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C

Frameworks & Libraries: Next.js, React, Node.js, tRPC, Drizzle ORM, FastAPI, Socket.IO

Databases & APIs: Supabase, PostgreSQL, REST APIs, Webhooks

Cloud, DevOps & Tools: GCP Cloud Run, AWS (EC2, S3, RDS, Amplify), Docker, GitHub Actions, Git, n8n
